Objective

- Seeking employment in a challenging environment. Implementation of 24/7 monitoring tools and full scale ticketing systems on no budget are a specialty. Automation of Linux administration tasks to increase productivity is also a strong suit.

Employment History

January 2006 - Now **SAP**

Scottsdale AZ

Systems Administrator

- Software Development Support in a Linux Administration role. Install and configuration of Netweaver Web Application Server. Managing Vmware ESX servers. Hardware/Software breakfix. Applications under my watch are Cacti (Network Vitals Graphing), Nagios (24/7 availability), CVS (Software Versioning system), Bugzilla (Bug tracking), Request Tracker (Ticketing System for Clients as well as Internal). Implemented each from research to operations. NIS/NFS both vital to our operations. Linux Support for our users, and helping our software development process by being hands on. Writing perl scripts to automated common administration tasks. During the Integration from Khimetrics to SAP, wrote perl scripts to handle a very large task of integrating our network into theirs very successfully. From large projects to small ones continue to manage a variety of tasks by priority independently and successfully. Support an troubleshoot a Java Application hosted on Netweaver with a backend Oracle Database.

September 2003 -
December 2005

Khimetrics Inc

Scottsdale AZ

Systems Administrator

- Manage over 300 machines, IBM Blade Centers, Veritas Netbackup, Nagios, Request Tracker Helpdesk Application, CVS, Bugzilla, PHPlist, SNMP Trap setup, Manage own workflow and demand a very high uptime. Perl scripting. Available for Desktop Support as needed. Very good with people, and work to increase value with open source products.
